

Medeso chosen by Metso as partner for delivery and implementation of strategic simulation platform

Metso, a global supplier of technology and services for the mining, construction and pulp and paper industries, amongst others, chose Medeso as its partner for their new engineering simulation platform.

Metso has made the decision to standardize its simulation platform in order to increase simulation efficiency globally. After an extensive evaluation of different vendors and their offerings, Metso chose ANSYS since their products offer both outstanding depth and breadth in all simulation disciplines. Furthermore, ANSYS was able to supply local support in all countries needed, either via local ANSYS offices and/or local channel partners.

Metso will continue to co-operate with local suppliers of ANSYS software and related services but chooses Medeso as its preferred partner in the Nordic region for simulation methodology, training and licensing solutions. For some time now, Metso has standardized its simulation platform, thus facilitating co-operation for all development centers worldwide.

Metso is a global supplier of technology and services for the mining, construction, power generation, oil and gas, recycling, and pulp and paper industries.

We are truly global – we have engineering, production, procurements, services business, sales and other operations in over 300 units in more than 50 countries. Worldwide we employ about 27,000 professionals serving customers in more than 100 countries. Today over 40 percent of our net sales come from the services business. In 2009 Metso Corporation's net sales were EUR 5,016 million. We have three segments: Mining and Construction Technology, Energy and Environmental Technology, Paper and Fiber Technology.

Our strategy aims for sustainable, profitable growth over the long-term. In the short-term, we are focusing on improving our competitiveness and cash flow and on securing our profitability. Global megatrends support our long-term strategic development and profitable growth targets.

We are convinced that standardizing on the ANSYS software platform provides great opportunities to coordinate our internal resources, while at the same time ensuring that software is available when and where needed.

**Johan Mikkela, Global IM Manager,
Engineering Applications, Metso MCT**

We appreciate our partner Medeso's efforts and achievements in coordinating deliveries from different vendors, including ANSYS, into one common simulation platform at Metso.

**Ismo Vaiste, General Manager,
Engineering Systems, Metso PFT**

Medeso has consistently followed their business concept to deliver added value to their customers. Therefore, it is most exciting and gratifying, that Metso chose Medeso as their partner for the development and implementation of their platform for simulation.

Arne Larsson, MD Medeso AB

Since its foundation in 1987, Medeso has supplied CAE knowledge and software to Nordic Industry, to improve simulation driven product development processes. Over the years, Medeso has grown to become the largest Nordic supplier of ANSYS® simulation tools and related services, with offices in Denmark, Finland, Norway and Sweden. For more information, please contact Arne Larsson at: + 46 21 470 35 69 or e-mail arne.larsson@medeso.se

ANSYS, Inc. develops and globally markets engineering simulation software and technologies widely used by engineers, designers, researchers and students across a broad spectrum of industries and academia. The company focuses on the development of open and flexible solutions that enable users to analyze designs directly on the desktop, providing a common platform for fast, efficient and cost-conscious product development, from design concept to final-stage testing and validation. Visit www.ansys.com for more information.
